Subject: Facility Requirements - Aluminum Research

We are trying to get experimental work going on three projects, viz:

1. Ammonoalunite Process
2. Basement Sweepings Recovery - Columbia Falls
3. AlF_3 Recovery from Failed Potlinings.

All three projects have been assigned a high priority by Anaconda Aluminum.

The attached notes by Tom Bolles and John Snodgrass outline, in general, the facilities, equipment and analyses required. What we really need is a good part of a lab somewhere.

Please think about any possibilities and I will be contacting you shortly to resolve this.
